

**Greenpoint Environmental Benefits Project
Community Meeting 1 Summary
March 21, 2012**

Community members identified over 100 different ideas for specific environmental benefit projects or project types. The State reviewed this list to ensure that all proposed projects are consistent with the 2011 settlement with ExxonMobil and the NYS Department of Environment Conservation's policy on EBPs. Consistent project ideas were then used as a guide in selecting a General Administrator with related expertise, and in developing a Request for Proposals (RFP) to attract project proposals addressing as many community ideas for improving Greenpoint's environment as possible. A list of the project ideas discussed at the meeting can be found in Fact Sheet #3.

Community members also identified preferences for criteria to be used in selecting a General Administrator to manage the GCEF. The State will follow a formal process to select the General Administrator, and these community preferences for selection criteria will be used by the State to guide this process. The State intends to involve the CAP in this process to the greatest extent allowable under government procurement rules. The criteria identified can be found in Fact Sheet #3.
